

eTicket

Mobile-first
enhanced user experience

Eco-friendly
a real benefit for nature

Online reports
for better insights

MOBILE, JUST LIKE YOUR CUSTOMERS

Save considerably on operators costs with the eTicket application, and improve the overall parking experience for your end-users at the same time. After a one-off registration, users can enter and exit your parking lot by means of a personal QR code, scanned at every device. Let end-users skip the wait at the payment terminal, as paying their parking spot using the in-app payment option has become ever more simple. The Amano Cloud server makes sure all of these operations can happen with the highest possible degree of data security.

SAVE NATURE & MONEY

Replace the traditional, printed parking tickets by a digital alternative, and save money while saving nature. On top, cash-handling costs can be significantly reduced and less hardware and maintenance will be needed. All of these small improvements result in a major benefit to global society.

BETTER INSIGHTS, MAXIMAL ROI

Like all other Amano solutions, eTicket is equipped with automated, hands-on reports which can be fully configured to the individual needs of the parking operator. Also the end-user stays informed, facilitating the transfer of costs to his employer, for example.
