

Overture Management System

XWebValidation

The XWebValidation Module is an online validation solution. Authorized personnel can apply a validation directly to an entry ticket. Security settings allow customized validations for authorized user groups/tenants to apply up to ten validations directly to the patron's ticket. This system only requires the patron to keep track of a single ticket to exit the facility at a discounted rate. The optional USB barcode scanner can simplify the ticket number entry into the system by automatically capturing ticket details.
